EDUCATION

University of Texas at Austin B.S. Art and Entertainment Technologies, Concentration in Game Development
GPA: 3.8 | Aug 2021 – May 2025

SKILLS

Languages: C#, Python, Java, C++

Engines and Tools: Unity 6 (URP), Unreal Engine 5, Blender, Maya, Fusion 360, Adobe Suite, DaVinci Resolve, Git, Xcode

AI-Assisted Dev: Claude, ChatGPT, Gemini, DeepSeek, GitHub Copilot — prompt engineering and AI output evaluation

Languages: English, Mandarin Chinese

WORK EXPERIENCE

Lead Game Designer and Developer, Digital Wizards Studios, *Spring 2024 – Present*

- Sole game development lead on a commercial educational iOS app for a toy company, teaching children about space through interactive gameplay; served as the only person with game development expertise, independently owning every creative and technical decision from concept through App Store distribution
- Acted as the primary design consultant between the client and production team — evaluated every incoming feature request for gameplay feasibility, pushed back constructively where needed, and translated non-technical briefs into complete game design documentation and playable systems
- Designed all core systems from scratch: a ScriptableObject-based currency economy, mission progression with PlayerPrefs persistence, interactive deep sky object exploration, a character shop, and an in-app eBook, all built in Unity 6 (URP) and deployed via TestFlight and the App Store
- Resolved critical iOS production issues, including device memory crashes, a broadcast bug affecting 42 simultaneous asset trackers, click-blocking from collider mismatches, and a video freeze from scene-load CPU contention
- Built three custom Unity Editor batch automation tools and a PostProcessBuild script to inject memory settings into Xcode builds; used AI-assisted workflows (Claude, ChatGPT, Gemini, Copilot) to maintain solo development velocity throughout a full production cycle

3D Assistant and Post-Production Intern, Digital Wizards Studios, *Fall – Winter 2024*

- Produced hard-surface 3D assets in Blender for a commercial toy line and edited stop-motion YouTube content in Premiere Pro and After Effects

Production Intern Blindlight LLC *Fall 2024*

- Coordinated scheduling and talent communications for AAA voice-over sessions with Bethesda and Activision across multiple simultaneous productions

Freelance Animator Mobile Fighting Game (Unannounced) *2025 – Present*

- Contracted as sole animator on an unannounced mobile fighting game; rigged character models in Blender from scratch and created a full set of combat animations, including attacks, idles, and movement cycles tuned for mobile gameplay
- Produced prototype animations on draft placeholder models before final assets were available, giving the development team a concrete visual reference for movement style, timing, and combat feel during early production

AI Trainer Handshake AI *April 2026 – Present*

- Author high-level prompts across creative and technical domains, evaluating model outputs for accuracy, naturalness, and reasoning quality to support AI training and refinement
- Identify systematic failure modes in generated content — including tonal inconsistencies, logical gaps, and unnatural phrasing — and iterate on prompt structure and language to produce measurably better responses

Video Editor and Creative Producer Jaden Wood YouTube *2023 – Present*

- Produce and edit video content on an ongoing basis using Premiere Pro, After Effects, and DaVinci Resolve; analyze engagement trends to inform content strategy and pacing decisions

PROJECTS

Prisoner of Light FPS Arena Shooter 3D Artist and Technical Developer *2024 – Present*

- Co-developed a first-person arena shooter in Unreal Engine 5 and Unity; animated and rigged all character models, built AI-driven enemy behaviors, and produced the official trailer in DaVinci Resolve. Playable at mega567835.itch.io/pol

The Adventures of Ranger Raccoon Health Education Game Technical Developer *2024 – Present*

- Programmed minigame mechanics for a UT Austin Health IT SPARK Grant-funded respiratory health game, collaborating with a 10-member interdisciplinary team integrating prototype hardware with gameplay systems
